

Who else needs chronic pain relief?

Chronic pain is one of the most challenging and difficult conditions people face treating safely and effectively. There is now a new safe pain therapy device that is economical and effective for many individuals suffering with chronic back pain for many years.

Pain itself often modifies the way the central nervous system works so that a person actually becomes more sensitive and gets *more pain with less provocation*.

That sensitization is called "central sensitization" because it involves changes in the central nervous system (CNS) in particular—the brain and the spinal cord. It's well understood that the

extent of tissue injury does not explain the level of pain, and chronic pain can be maintained even after an initial injury has healed. ActiPatch's neuro stimulation continuously disrupts this signal to allow a good night's sleep and restores daily activities.

The Pain Management publication published a Registry Study of 5,000+ using an ActiPatch 7-Day trial device report a baseline VAS pain score of 8+ of which 2/3 had more than 57% pain relief. This reflects that many individuals respond poorly to drug therapies.

ACTIPATCH LONG-TERM USE:

- 2/3 (including opioid users) reported moderate to complete elimination of pain medications
- 2/3 reported improved sleep
- 3/4 increased physical activity
- 4/5 experienced a substantial improvement in overall quality of life.

This data demonstrates that ActiPatch has a higher response rate and is much more effective than common chronic pain drugs and other therapies for chronic back pain. ActiPatch is drug-free, and unlike medications, there are no adverse effects. It is safe for people with diabetes, the elderly, and those with heart and lung disease.

ActiPatch can be used safely 24 hours a day for extended pain relief. ActiPatch long-lasting pain relief has been proven to help people get a good night's rest. It's the new pain reliever that lets you be your best!

ActiPatch is now available at Lloyds Pharmacy, Boots, Superdrug and Gordons Chemist stores
